Immunostimulation and anti-DNA antibody production by backbone modified CpG-DNA

ABSTRACT: Oligodeoxynucleotides containing immunostimulatory CpG motifs (CpG-DNA) have gained attention as potentially useful therapeutics. However, the phosphorothioate-modified CpG-DNAs (PS-CDN) can induce backbone-related side effects. Here, we compared the immunostimulatory activity of natural phosphodiester CpG-DNA (PO-CDN) from *Mycobacterium bovis* and PS-CDN in mice. Both PO-CDN...

...numbers, or IgM production. These results may provide an explanation for the side effects in immunotherapeutic application of PS-CDN. They also suggest that PO-CDN may be more optimal than...

ABSTRACT: Immunostimulatory activities of synthetic oligodeoxynucleotides containing CpG motifs (CpG-ODNs) have gained attention as potentially useful immunotherapeutics. However, CpG-ODNs induce harmful and lethal shock effects because they greatly enhance the sequence-dependent induction of tumor necrosis factor-alpha (TNF-alpha). We have shown that phosphorothioate-modified oligodeoxynucleotides (PS-ODNs) of the CpG-ODN 1826 stimulate TNF-alpha gene expression, TNF-alpha promoter activity, IkappaB degradation, and NF-kappaB activation at higher levels compared with its phosphodiester ODN (PO-ODN). In contrast to the effects of CpG-ODN 1826, PS-ODN of...

...the innate immune responses by modulating the potency of CpG-ODNs via sequence rearrangement and phosphorothioate backbone modification.

Phosphodiester CpG oligonucleotides as adjuvants: Polyguanosine runs
 enhance cellular uptake and improve immunostimulative activity of
 phosphodiester CpG oligonucleotides in vitro and in vivo

... ABSTRACT: g. antigen-presenting cells (APC). The rate of uptake is
 influenced by the DNA's backbone modification and critically
 determines activity of CpG-DNA. CpG-ODN with a phosphothioate
 backbone (PTO) are currently used for most in vivo and in vitro studies,
 since PTO...

...To circumvent these restrictions we investigated the effects of DNA
 sequence as well as DNA backbone modification on cellular
 uptake and resulting immunostimulation. We show here that uptake of
 phosphodiester (PO)-CpG-ODN can be strongly enhanced by poly
 guanosine runs added at the 3' end of the ODN. In addition these ODN
 showed an improved immunostimulatory activity in vivo and in vitro.
 This included protection of mice against lethal Th2-dependent...

Phosphorothioate Backbone Modification Modulates
 Macrophage Activation by CpG DNA
 ABSTRACT:

10789353a.txt

Macrophages respond to unmethylated CpG motifs present in nonmammalian DNA. Stabilized phosphorothioate-modified oligodeoxynucleotides (PS-ODN) containing CpG motifs form the basis of immunotherapeutic agents. In this study, we show that PS-ODN do not perfectly mimic native DNA...

...CpG-containing PS-ODN were active at 10- to 100-fold lower concentrations than corresponding phosphodiester ODN in maintenance of cell viability in the absence of CSF-1, in induction of...

...components may contribute to this, as PS-ODN were slower and less effective at inducing phosphorylation of the extracellular signal-related kinases 1 and 2. In addition, at high concentrations, non-CpG PS-ODN specifically inhibited responses to CpG DNA, whereas nonstimulatory phosphodiester ODN had no such effect. Although nonstimulatory PS-ODN caused some inhibition of ODN uptake...

...did not adequately explain the levels of inhibition of activity. The results demonstrate that the phosphorothioate backbone has both enhancing and inhibitory effects on macrophage responses to CpG DNA.

Abstract: We have evaluated the specificity and the variation in activity
 against human immunodeficiency virus (HIV) infection of antisense
 oligodeoxynucleotides (ODNs) with regard to factors such as
 dose-response range, number and choice of experimental controls,
 backbone modifications of the ODNs, type of cell infection,
 length of assays, and delivery approach. The highest...

... assay with MOLT-3 cells acutely infected with HIV-1 (11IB) and treated
 with free phosphorothioate-modified ODNs (PS-ODNs). The highest
 level of specificity was observed in our short-term...

... Abstract: and nucleic acid cross-linking studies.

The automation of oligonucleotide synthesis, the development of
versatile phosphoramidite reagents, and efficient scale-up have
expanded the application of modified oligonucleotides to diverse areas
...

... biological research. Numerous reports have covered oligonucleotides for
which modifications have been made of the phosphodiester
backbone, of the purine and pyrimidine heterocyclic bases, and of the
sugar moiety; these modifications...

... such chemically modified oligonucleotides. Because of space limitations,
we discuss only those oligonucleotides that contain phosphate and
phosphate analogs as internucleotidic linkages.

Response of peripheral blood mononuclear cells from lupus patients to
 stimulation by CpG oligodeoxynucleotides

Zeuner, RA; Klinman, DM; Illei, G; Yarboro, C; Ishii, KJ;
 Gursel, M; Verthelyi, D

ABSTRACT:

... to the initiation and/or perpetuation of the disease. This study
 characterizes the in vitro response of peripheral blood mononuclear
 cells (PBMC) from SLE patients to CpG DNA. Methods. Secretion of...

...co-stimulatory molecules and the secretion of interferon-[alpha] and
 interleukin-6 (IL-6) in response to CpG ODN was significantly reduced
 in monocytes and dendritic cells from SLE patients. Secretion...

...by natural killer (NK) cells was also reduced. In contrast, the IgM and
 IL-10 response of B cells to CpG ODN was normal. Conclusion.
 Monocytes, dendritic cells and NK cells...

 CpG oligonucleotides improve the protective immune response induced by the anthrax vaccination of rhesus macaques

Klinman, DM; Xie, H; Little, SF; Currie, D; Ivins, BE

ABSTRACT:

Synthetic oligodeoxynucleotides (ODN) containing unmethylated CpG motifs act as immune adjuvants, improving the immune response elicited by co-administered vaccines. Combining CpG ODN with anthrax vaccine adsorbed (AVA, the licensed human vaccine) increased the speed, magnitude and avidity of the resultant anti-anthrax response. The protective activity of these Abs was established by passive transfer to anthrax-challenged mice. The ability of CpG ODN to accelerate and magnify the immune response to AVA suggests this strategy may contribute to

the development of prophylactic and therapeutic vaccines...

 Identifying agonists of Toll-like receptor (TLR) signaling activity, useful
 therapeutically or prophylactically, comprises contacting an RPM 8226
 cell that expresses a TLR with a test compound and measuring TLR
 signaling activity - toll-like receptor and antagonist and agonist for
 use in disease therapy

 Inducing immune response in subject useful for preventing and/or treating
 viral infection e.g., human papilloma virus infection, involves
 topically administering oil-in-water emulsion and immunostimulatory
 nucleic acid, to subject - CpG immunostimulant oligonucleotide transfer
 and expression in host cell for nucleic acid vaccine and gene therapy
